Sow 'KILLARNEY'—And Walk on Velvet

LAWN VIEW OF PRIVATE ESTATE SOWN WITH BURNETT'S "SPECIAL" LAWN GRASS SEED MIXTURE

BURNETT'S LAWN GRASS SEED MIXTURES

The Satisfaction of a Perfect Lawn

A fine lawn is obtained by the careful and exact fulfillment of three fundamental requirements. Preparation of the seed bed, the use of good grass seed and the proper maintenance of the turf once established. These three factors are of equal importance, and failure to meet the requirements of any of these will make the efforts expended on the other two of little avail. **Burnett Bros. Inc.,** with a reputation of supplying grass seeds of the highest quality for a period of over thirty years, assume the responsibility of furnishing good seed.

Quantity to Use

For all general purposes, 1 lb. will sow 150 to 200 sq. ft.; 150 to 200 lbs. per acre. Use one-half these quantities when renovating an old lawn.

BURNETT'S "KILLARNEY" MIXTURE

Burnett's Lawn Grass Seed Mixture "Killarney" is composed of a combination of the finest imported and domestic grasses, the highest grades possible to procure, and specially adapted for this climate. This mixture is composed of all solid, recleaned seeds of the highest germination. Therefore, owners of large estates requiring a permanent sod and everlasting lawn should by all means use this high-grade mixture. If the ground is properly prepared, we are certain **"Killarney Mixture"** will produce a turf of velvet, equal to the most famous lawns in Europe.

The above mixture is made from our own formula, and composed of grasses specially adapted for the purposes of producing turf which retains its rich green color and velvety appearance throughout the entire summer and fall. In making up this high grade mixture we are careful to use only the very finest quality of all the most desirable, dwarf evergreen, **recleaned** grasses, free from chaff and weeds, which thrive well on any soil, thus ensuring a beautiful and permanent lawn.

View showing Lawn sown with BURNETT'S "SHADY PLACE" Lawn Grass Seed Mixture

BURNETT'S "SHADY PLACE" MIXTURE

When a lawn is much shaded, either in whole or in part, the shaded portions should be sown with Burnett's "Shady Place" Lawn Grass Mixture, which is a combination of fine, dwarf-growing evergreen varieties, which, in their wild or natural state, are to be found growing in the woods or other sheltered or shady places. Under or in the immediate neighborhood of large trees fertilizers should be applied liberally and frequently, for the trees absorb the fertilizer and impoverish the ground. Ground much shaded is very frequently sour, and if the drainage is defective it is apt to be covered with moss. In such cases an application of lime or wood ashes raked in will sweeten the soil, but the moss should be first removed with a sharp steel-toothed rake. JAPANESE BEETLE GRUBS

Courtesy of U. S. DEPARTMENT OF AGRICULTURE

JAPANESE BEETLE

The most serious lawn insect pest in recent years. The grubs feed on the roots of the grass during May and June and again in August and September. The serious increase of this pest threatens the very existence of our gardens and lawns. Earnest cooperation of all within the infested area in fighting the Japanese Beetle is the only solution to the control of this menace. Grub proofing of lawn areas with **Arsenate of Lead** kills the grubs and safeguards the lawn from damage.

Rate of Application—1 lb. to each 100 sq. ft. Apply either in early Spring or late Summer. Rake in thoroughly. **See page 69 for prices.**

HAIRY CHINCH BUGS

HAIRY CHINCH BUG

The most logical control of this and other lawn pests is through the establishment of various individual grasses which are less susceptible to insect injury. We highly recommend our new **"Permanent Turf"** Formula for this purpose. (*See above*). The most effective chemical controls are either pure **Tobacco Dust or Rotenone Dust** applied at the rate of 2 to 4 lbs. per 100 sq. ft. Application should be made during the hottest part of the day and the material thoroughly brushed in. There are two broods, application for the first should be made in early June and in early August for the second. (*See page* 70.)

PERMANENT TURF

The House Famous for Lawn Grass Seed's "NEW LAWN FORMULA" Prepared Especially for Chinch Bug Infested Areas

Many beautiful lawns throughout certain areas of the eastern coast of the United States and elsewhere have been completely destroyed as a result of the extensive ravages of a recent lawn pest. the Chinch Bug. This bug is of the sucking insect type and does its damage to lawns by piercing the grass blades and shoots near the soil level and sucking out the juices of the grass.

Certain grasses have been found to be highly resistant to the attacks of this insect and it is a careful blending of these grasses that make up our **"Permanent Turf."**

Permanent Turf (no Clover). 12½ lbs. $12.00, 25 lbs. $22.00, 100 lbs. $78.00, 500 lbs. $350.00.

Permanent Turf (with White Dutch Clover). 12½ lbs. $12.50, 25 lbs. $22.50, 100 lbs. $80.00, 500 lbs. $360.00.

Permanent Turf (with Kentish Wild White Clover). 12½ lbs. $13.00, 25 lbs. $24.00, 100 lbs. $85.00, 500 lbs. $380.00.

SEASHORE FORMULA

This mixture is composed of grasses most suitable for areas near the ocean. Will give good results in any sandy soils. Deep rooting grasses that are not injured by salt water. **Seashore.** Lb. 65c., 5 lbs. $3.00, 12½ lbs. $7.25, 25 lbs. $13.50, 100 lbs. $50.00.

BURNETT'S "BANK AND TERRACE" MIXTURE

On sloping banks it is often necessary to use sod, as heavy rains wash the soil off before the grass seed has time to germinate. It is sometimes even necessary, in sodding very steep banks, to use pins 8 or 10 inches in length to pin the sods in place, to prevent them from being washed down by excessive rains before the grass roots have had time to fasten in the soil. The Terrace mixture which we offer is composed of deep-rooting grasses which, if once established, will hold the soil and prevent washing. We advise liberal fertilization and seeding so that the grasses may be quickly established.

Lb. 80c., 5 lbs. $3.85, 12½ lbs. $9.25, 25 lbs. $17.50, 100 lbs. $65.00

BURNETT'S BEAUTIFUL ASTERS

The introduction of a Wilt-resistant strain of Asters of recent years has helped tremendously in restoring this beautiful flower to popular favor as a garden plant. Up until the time of the origination of this resistant strain, garden enthusiasts were becoming discouraged trying to grow Asters outdoors with the wilt-disease so prevalent. The appearance of this new strain has again awakened interest in the culture of Asters.

For best results the ground cannot be too richly prepared. Plants from seed sown in the open ground in May will bloom in September and October. For July and August flowers, sow in March or April in cold frames or hotbeds. We especially recommend the following as being the best for cutting and general garden use.
